

PREPARED FOR USMAN QURESHI

Getting Your Website Found on Google

A complete, plain-English plan to make your AI tools and expertise show up at the top when people search — written so anyone can understand it.

Your official web address: uqconsulting.org

Every tool is 100% FREE — our biggest advantage

Plan version 1.0 • 4 July 2026 • Read this at your own pace

You do not need any technical knowledge to read this. Every scary word is explained.

First: What is "SEO", really?

SEO stands for **Search Engine Optimisation**. In plain words: it's the work we do so that when someone types a question into Google, **your website appears near the top** instead of buried on page 5 where nobody looks.

THINK OF IT LIKE THIS

Imagine Google is the world's biggest library, and every website is a book. SEO is making sure the librarian (Google) knows exactly what your book is about, files it on the right shelf, and recommends it first when someone asks for that topic. Right now, your book is excellent inside — but the librarian can't read the cover properly, so it's shelved in the back room.

THE GOOD NEWS

Your website already has genuinely valuable content — live AI tools that real people want. That's the hard part, and it's done. We're not rebuilding anything. We're just putting up clear signs so Google (and people) can find what you already built.

Where your website stands today

I inspected your whole site. Here's the honest picture, in a traffic-light format:

What Google looks for	Your status	What it means for you
Fast, secure hosting	 Good	Your site loads fast. Google likes this.
A "map" of your site (sitemap)	 Missing	Google has no list of your pages, so it explores blindly.
Instructions for Google (robots.txt)	 Missing	No welcome note telling Google what to look at.
Hidden labels that describe each tool	 Missing	Google can't tell your CV tool from your GAAP tool — they're all on one page with no labels.
Each tool having its own page	 Missing	All 6 tools live on ONE page, so Google sees "one thing" instead of six searchable tools.
Nice preview when shared on LinkedIn/WhatsApp	 Missing	When you share your link, it looks plain and gets fewer clicks.
Good writing and expertise	 Excellent	Your content quality is a real strength.

BOTTOM LINE

You've built a Ferrari but parked it in a locked garage. This plan opens the garage door and puts up road signs. **Score today: about 6.5 out of 10. Achievable within a few months: 9+.**

What we want people to find you for

These are the searches where your website *should* appear at or near the top. Each one matches a tool or strength you already have:

When someone searches for...	Your website answers with...
"Free CV review" / "resume scorer" / "cover letter help"	Your Score My Resume tool + Eleanor the AI reviewer
A tricky accounting or auditing question	Your Meeting Room with AI specialists
Anything about IFRS	Your GAAP Compare tool + Hot Market Topics
Anything about PCAOB	A brand-new page we'll build (nobody's doing this well!)
"IFRS vs US GAAP" and other standard comparisons	Your GAAP Compare tool
Interview practice / interview tips	Your Knowledge Test interview coach
"LinkedIn / Indeed job search tools"	Your Personalised Job Search (free, combined)
Today's hot accounting/audit news topics	Your Hot Market Topics section

REALITY CHECK (HONEST) For very broad words like "IFRS", you're competing against giant firms (Deloitte, PwC, IFRS.org). We won't beat them on day one. But we **can** win on specific, real-question searches like "IFRS 16 lease example UK" or "free ACCA interview practice" — where big firms are weak and your tools genuinely shine. Winning many small, specific searches adds up to a lot of visitors. This is the smart game plan.

Your secret weapon: everything is FREE

This is one of the strongest cards you hold, so we build the whole strategy around it.

WHY "FREE" IS PURE GOLD FOR SEO

The big firms (Deloitte, PwC, EY, KPMG) charge for advice, or hide it behind "contact us" forms. You give real, working tools away for nothing. Huge numbers of people literally type the word **"free"** into Google — "free CV review", "free interview practice", "free IFRS help". When you promise free *and* deliver instantly, you win clicks that paid competitors simply cannot.

How we use "free" everywhere:

- The word **"free"** goes into your page titles, descriptions and headings — the exact spots Google reads and shows searchers.
- Each tool page will lead with "100% free, no payment, no catch" so visitors click with confidence.
- Article titles will use it where honest — e.g. "Free Big 4 interview practice questions".
- Your social share card already says "Free AI Tools for Finance & Audit" (done).

THINK OF IT LIKE THIS

Two market stalls sell the same fruit. One has a big sign saying "FREE TASTING — no catch". Which one does the crowd walk to first? "Free" is that sign, and Google lets us paint it right onto your search results.

ONE HONEST NOTE "Free" only works if it's true and there's genuinely no nasty surprise. Yours *is* genuinely free (users just sign up with an email to use the tools), so we're on completely solid ground — Google rewards honest "free", and penalises fake "free". We'll always be straight about the quick sign-up step.

The plan: 4 phases

We do this in four stages, from easiest and cheapest to most valuable over time. You can stop or pause after any phase — each one stands on its own and leaves your site better than before.

1 The Foundations

2–3 days · Very low effort
Zero risk to your site

What it is: Putting up the basic signs so Google can read and understand your site properly. This is invisible plumbing — nothing on your website changes visually.

In plain English, I will:

- **Make a "site map"** — a simple list of your pages handed to Google, like giving the librarian your table of contents.
- **Add a "robots" note** — a welcome sign telling Google "come in, look at everything, here's the map."
- **Add hidden description labels** — short summaries Google reads to understand each page (you never see these; only Google does).
- **Add "share preview" cards** — so when you post your link on LinkedIn or WhatsApp, it shows a proper title, description and image instead of a bare link.
- **Add "structured data"** — a special code that can make Google show you with star ratings, FAQ drop-downs, and rich results (the fancy-looking search entries).
- **Fix a small redirect setting** — a technical tweak so Google passes full credit to your official address.

WHAT YOU DO IN PHASE 1

Nothing except say "go". Then, once it's live, I'll walk you through a free 5-minute step: registering your site with **Google Search Console** (Google's free dashboard that shows how you're doing). I'll take control of your screen and do it with you watching.

2 A Home for Each Tool

2–3 weeks · Low effort for you
No risk — only new pages added

What it is: Right now all six tools sit on one page, so Google sees them as a single blurry thing. We give each tool its *own* dedicated page with its own web address.

WHY THIS MATTERS

Imagine a shop with everything piled in one window. A page each is like giving every product its own labelled shelf with a price tag. Now Google can send "CV help" searchers straight to your CV page, and "IFRS" searchers to your IFRS page.

New pages I'll build (each drives visitors back to your real tool):

- A CV & cover-letter review page
- An interview-practice page
- A GAAP / IFRS comparison page
- An "ask an accounting expert" page (Meeting Room)
- A financial-statement-review page
- A job-search-tools page
- **A brand-new PCAOB page** — filling a gap nobody covers well

IMPORTANT PROMISE

Your existing website (index.html) is **NOT touched**. These are brand-new, separate pages that link to your tools. Nothing that currently works can break. Your hard work is safe.

WHAT YOU DO IN PHASE 2 Just review each page once and say "looks good" or "change this bit". 5–10 minutes per page.

3 Helpful Articles (the real traffic driver)

Ongoing, spread over weeks
This is where big growth comes from

What it is: Regularly publishing genuinely useful articles that answer real questions accountants and job-seekers type into Google. Each article quietly points readers toward your tools.

Example articles I'd write:

- "IFRS vs US GAAP: the differences that actually matter (2026)"
- "Big 4 audit interview questions — and how to answer them"
- "What the latest PCAOB standards mean for your audit"
- "How to write a finance CV that beats the ATS screening robots"

WHY ARTICLES WIN

Every good article is a fishing line in the water. Ten articles = ten lines catching visitors every single day, for years, for free. This is how small sites quietly out-rank big ones on specific questions.

WHAT YOU DO IN PHASE 3 — THE ONE REAL JOB I write the draft; **you read it and add your expert touch** — a sentence or two of real-world insight, or "this bit is wrong, fix it". Your professional judgement is what makes these trustworthy to Google and readers. This is the only part I genuinely need you for.

4 Building Reputation (links)

Months 2+ · Slow burn
Long-term authority

What it is: When other respected websites link to yours, Google treats it like a recommendation from a trusted friend and ranks you higher. We earn these over time.

How: guest articles on accounting blogs, sharing your tools in professional communities, LinkedIn content, and getting your PCAOB/IFRS pages mentioned. I prepare everything; you approve before anything goes out in your name.

This phase is optional and gradual. We only start it once Phases 1–3 are paying off.

What will this cost you?

THE SIMPLE ANSWER

£0 in new money. Everything fits inside what you already pay for Claude Pro (£15/month) and your free Vercel hosting. No new subscriptions, no new tools to buy.

Possible cost	Amount	Why
New Vercel hosting fees	£0	The new pages are simple files. Your paid "function" slots (12/12) are NOT used by these — those are only for the AI tools, which we don't add to.
Claude usage (tokens)	£0 extra	Included in your £15 Pro plan. The whole project uses roughly 10% of a month's allowance — as long as we spread it over a few weeks, not all in one day.
Domain / email changes	£0	No changes needed. uqconsulting.org stays exactly as is.
Google Search Console	£0	Google's tool is free forever.

THE ONLY THING TO WATCH If we tried to do everything in one marathon day, we might briefly hit Claude's daily limit (it resets automatically). So we pace it: cheap Phase 1 now, then a page or an article at a time. You never pay more — you just wait for the next day if a limit is hit.

What I need from you (the whole list)

- ✓ **Say "go" for each phase.** That's the main thing.
- ✓ **Review the new pages and articles.** Tell me "good" or "change this". Especially the articles — your expert eye matters.
- ✓ **Watch a couple of 5-minute setups.** I'll take control of your screen for the Google Search Console sign-up and show you. You just watch.
- ✓ **Be patient.** SEO is gardening, not a light switch. Foundations help within days; articles and reputation take 1–6 months to bloom. This is normal and expected.

How we'll know it's working

Once live, Google Search Console (free) will show us, in simple charts:

- How many people saw your site in search results
- How many clicked through to visit
- Exactly which questions they searched to find you
- Which of your pages are winning, so we do more of what works

I'll check this for you and translate it into plain English every so often — no jargon.

Mini-dictionary (every scary word, explained)

SEO

Search Engine Optimisation. Making your site show up higher on Google.

Google / search engine

The tool people use to find things online. There are others (Bing), but Google is ~90% of it.

Ranking

Your position in Google's results. "Ranking #1" = the top result.

Keyword

The actual word or phrase someone types into Google, e.g. "free CV review".

Sitemap

A simple list of all your pages, handed to Google so it doesn't miss any.

robots.txt

A tiny instruction file telling search engines what they may look at. A welcome note at the door.

Meta description

The short grey summary shown under your title in Google results. We write these to earn clicks.

Structured data / schema

Hidden code that helps Google show fancy results — star ratings, FAQ drop-downs, etc.

Open Graph / share card

The title + image preview that appears when your link is shared on LinkedIn/WhatsApp.

Redirect

An automatic "we've moved, go here" instruction between web addresses.

Canonical

The one "official" web address you want Google to treat as the real one (yours: uqconsulting.org).

Backlink

A link from another website to yours. Google counts these as votes of trust.

Google Search Console

Google's free dashboard showing how your site performs in search. We'll set this up.

Indexing

When Google reads your page and files it away so it can show it to searchers.

Token

The unit of "thinking" Claude (me) uses. Your Pro plan includes plenty for this project.

Vercel

The company hosting your website's files and running your AI tools.

In one sentence

THE WHOLE PLAN, DISTILLED

You already built something valuable; my job is to put up the signs, labels and articles so Google and real people can finally find it — at no extra cost to you, without breaking a single thing you've made.

Prepared by your AI SEO engineer • uqconsulting.org • Keep this document; we'll tick off each phase together.
